

RAHUL DHYANI

Haryana, India | rahuldhvani122000@gmail.com | 8395962379 | github.com/Raazei

SUMMARY OF QUALIFICATIONS

- **M.Tech Artificial Intelligence student** specializing in quantitative finance and algorithmic trading — applying deep learning and reinforcement learning to real-world market constraints such as transaction costs, regime shifts, and risk-adjusted returns.
- **Published researcher** (IJIREM journal) with a peer-reviewed comparative study benchmarking machine learning, LSTM, and reinforcement learning strategies for automated equity trading.
- **Practical AI builder** of end-to-end applications — from data pipelines and model development to live, deployed tools.

EDUCATION

Amity University, Gurugram	2024 – 2026
<i>Master of Technology, Computer Science & Engineering (Artificial Intelligence) — Gurugram, Haryana</i>	
PDM University	2018 – 2022
<i>Bachelor of Technology, Computer Science & Engineering — Bahadurgarh, Haryana</i>	
St. Xavier's School	2016 – 2018
<i>Senior Secondary (Class 12) & Secondary (Class 10), CBSE — Bhiwadi, Rajasthan</i>	

TECHNICAL SKILLS

Programming Languages: Python, C++, R, MATLAB

AI & Machine Learning: Machine Learning, Deep Learning, NLP, Prompt Engineering, Generative AI, LLM Applications, Agentic AI, RAG, Vector Databases

Automation & Integration: REST APIs, API Integration, CI/CD

Development Tools: Git, Docker

CERTIFICATIONS

- Machine Learning with Python — SWAYAM NPTEL
- Mathematics for Machine Learning — Udemy (Krish Naik)
- Complete Data Science, Machine Learning, Deep Learning, NLP Bootcamp — Udemy (Krish Naik)

PROJECTS & RESEARCH

AIBotTrade	<i>Published Research — IJIREM Journal</i>
• Built and backtested an algorithmic trading system comparing Machine Learning (Gradient Boosting), LSTM, and PPO reinforcement learning on 1,543 days of NSE-calibrated equity data (2018–2023), applying realistic 10 bps transaction costs and a dedicated bear-market stress test (Jul 2022–Dec 2023) that most published studies omit. • LSTM delivered the strongest risk-adjusted performance — 42.30% return, 0.83 Sharpe ratio — from just 63 trades (0.63% cumulative transaction cost), outperforming Buy-and-Hold, Random Forest, SVM, and PPO baselines. • Uncovered an accuracy–profitability paradox: GBM’s 35.23% directional accuracy (near-random) still produced a 27.05% return, 0.55 Sharpe, while PPO’s bull-market-trained regime mismatch drove a -0.16 Sharpe by buying 55.1% of the time in a falling market. • Published in the <i>International Journal of Innovative Research in Engineering & Management (IJIREM)</i>, Vol. 13, Issue 3 (June 2026); paper: doi.org/10.55524/ijirem.2026.13.3.3	
MeetWise — AI Meeting Summarizer	
• Built and deployed an end-to-end AI meeting summarizer (Python, Streamlit, Whisper, Groq LLMs) that transcribes meeting audio and auto-generates summaries, key discussion points, and action items. • Designed the full pipeline from audio ingestion and Whisper-based transcription through LLM-driven summarization, packaged as a live, publicly deployed web app. • Live demo: meetwise-l9a3frfqhbstbrbab3hujwq.streamlit.app
